

PV Sunplugged GmbH

Andreas Zimmermann Managing Director of the Austria based photovoltaic company Sunplugged GmbH started the company back in 2006, and since then the company has been working on CIGS flexible photovoltaic modules.

Sunplugged develops and manufactures flexible photovoltaic modules according to customer requirements. Their photovoltaic modules are light-weight, flexible and easy to integrate. Even low quantities can be produced economically and the design is optimized according to the requirements of their customers. The company is specialized in novel customisable CIGS solar cell/module for PV integrated products.

Andreas got introduced to LCA to go through the project's partners GAIA. He was very interested to know more about the tool, and that's why he decided to join an online skype training session conducted by Fraunhofer Institute IZM on the 30th of September 2014.

He found the results from the tool very helpful and interesting, and thinks that it will be very constructive to add the results from the tool to his future projects.

Andreas also described the LCA to go tool: "Very concise tool; gives a good overview with a few clicks".
