

## PV Waas Solar BVBA

**Chris Poppe CEO of the Belgium based renewable energy company Waas Solar BVBA has a vision of a greener future for us, our children and our children's children. As the owner of the company, he is on a mission to make that vision a reality for thousands of people**

Waas Solar BVBA is a leading, fast growing company since its establishment in 2007. It is specialized in the placement of solar panels. With its 12 employees the company distinguishes itself from the competition by its own specialized installation teams and attention to detail. They offer their services to both private clients and enterprises

Chris got introduced to LCA to go through an E-mail from the project's partners Sirris. He was very interested to know more about the tool, and that's why he decided to join a training session conducted by Fraunhofer Institute IZM in Leuven on the 9<sup>th</sup> of September 2014.

Chris assessed a project that was recently offered to a customer but not installed yet using the LCA to go tool. The system has a capacity of 275 kWp and will be installed in Belgium. He found the results very interesting and realized that using a better performing module would have a positive impact on the LCA and the EPBT of the system.

Chris found the results he got from the tool very helpful and interesting to give to his customers with his offers, and thinks that it will be very constructive to add the results from the tool to his future projects.

Chris also described the LCA to go tool: "It is an easy to use system to get LCA information and print it for the customers"
