

PV Zengo Energy Ltd

Sean Murphy is CEO of London based solar power company Zengo Energy Ltd. Zengo Energy Ltd have installed over 750MW of systems since 2009. From UK to Israel to Greece to Spain, their clients are commercial, scattered around the globe and prioritise high quality products above all else.

Sean first found out about LCA to go when Cardiff based partners Ecodesign Centre extended an invitation to the launch event of LCA to go: PV in Cardiff.

Sean was knowledgeable in LCA before attending the event, having had some experience in both LCA and Carbon Footprint measures. Despite his experience, Sean still rated the event to be useful to both himself and his business.

When using LCA to go, Sean was particularly impressed with the speed it assessed the environmental performance of a system, which he thinks could save invaluable time in the future.

Sean also found the tool intuitive, both easy to use and understand, but valued the training to support its use. Sean provided feedback in the use of LCA to go, making valuable recommendations in its pilot stage that could aid businesses to use LCA to go independently of support.

If Sean were to apply LCA to go at Zengo Energy Ltd, he would use it to feed into his organisation's sustainability reporting, make environmental improvements and to improve knowledge within the company of LCA.
